- ★ The software which belongs to the printer or China Maintop
-

Technological Process

Cloth material preparation→ printing→ drying→ baking(100-140 °C , 3minutes , very important and useful step) →finished product

Attention:

1. If you use other ink before Myink products, it's better to use our cleaning ink first, and then use our coating ink.
 2. How to use the cleaning ink: After filling the ink, please start the cleaning function of the printer with standard cleaning model for three times or completely cleaning model for once.
 3. The ink could be directly printed in the material of cotton cloth, and then need to be hot-pressed 180 seconds (100~130 °C) for best color effect.
 4. The print model had better to be higher resolution, such as photo model or 720*1440 to have vivid color performance
 5. keep it airtight in 5~25 °C , and please use it up within 60 days after open it.
